

INTEGRATED SYSTEMS SYSTÈMES COMPLETS

Integrated systems for all functions

Systèmes complets pour tous types de fonctions

Integrated systems in the area of primary suspension enable compact design of components that allow a flexible adaptation to the NVH characteristics of the train system.

- » Primary suspension with integrated coil spring
Optimized compact system with three different stiffness characteristics and acoustic insulation
- » Coach connection
Higher operational reliability of the tram up to the high-speed train
- » Low conical stiffness spring seat
Improvement of helical spring lifetime

- » *Anvis Industry propose des systèmes complets permettant de répondre à toutes les exigences et contraintes rencontrées par nos clients.*
